(Up to 250 different SPS variables can be read from an SPS by a REX router)
- ✓ and many more features

myREX24 V2 Public Server Free-Account

The myREX24 V2 portal is an integrated system for accessing the components of your machine or system, for remote maintenance and remote diagnosis. Control the data of your system via web browser - directly with your smartphone or tablet. All data and states that are available to you as an external signal or as a value in a control system can be evaluated and monitored with the myREX24 V2 portal. Log operating data directly in the myREX24 V2 portal and create your own reports.

The license is non-transferable!

[> Set up myREX24 portal access.](#)

With the free account you get access to our myREX24 V2 portal and use the full innovative functionality with an unlimited number of devices and users.

Whether you primarily want to do remote maintenance, receive alarms from your machines or visualise and log data from your machine, the myREX24 V2 portal is always at your disposal. Don't worry about hosting and software maintenance, we take care of everything.

Expand your account with the options you need for your remote maintenance or IoT application.

If the free standard functions of the "Free Account" are not enough for you, you can flexibly book additional licences and options as required. If you would like to control the myREX24 V2 server yourself, we recommend the myREX24 V2 Virtual Server.
