

Features

- ✓ LDAP connector for the myREX24 V2 portal
- ✓ Encrypted connection possible using SSL (LDAPS) or TLS (STARTTLS).
- ✓ User import via LDAP

myREX24 V2 Public Server LDAP-Connector

The myREX24 V2 portal is an integrated system for accessing the components of your machine or system, for remote maintenance and remote diagnosis. Control the data of your system via web browser - directly with your smartphone or tablet. All data and states that are available to you as an external signal or as a value in a control system can be evaluated and monitored with the myREX24 V2 portal. Log operating data directly in the myREX24 V2 portal and create your own reports.

The license is non-transferable!

[> Set up myREX24 portal access.](#)

The LDAP connector makes it possible to control password management centrally via directory services. The LDAP protocol (Lightweight Directory Access Protocol) is used, for example in conjunction with the Microsoft Windows Server (Active Directory).

This function means that you do not log in directly to the portal, but rather via the directory service. For example, if you deactivate a user in Active Directory, that user will automatically be globally banned.

User accounts and their rights are still managed on the remote service portal server. Only the user password is exchanged via the directory service, i.e. the domain password. Note that the corresponding user must exist in the directory service in order to authenticate.
